*4 Month Post-Op
– Complete Regeneration
of Buccal Wall*

"Following atraumatic extraction and debridement of tooth #8, bone sounding revealed a moderate buccal dehiscence. The socket was grafted with particulate bone graft (LifeNet Health® 70/30). A 15x20 OraMEM-Sustained® membrane was trimmed and inserted into a buccal pouch. A resorbable monofilament suture was used to stabilize the site with intentional secondary intention healing. After 4 months, implant surgery was performed and complete regeneration of the buccal wall defect was noted."

*Two Implants Placed In
New Host Bone*

"Following extraction of tooth #3 and #4, a moderate buccal plate dehiscence was noted. The sockets and buccal defects were grafted with particulate bone graft (LifeNet Health® 70/30). An OraMEM-Sustained® membrane was trimmed and adapted over the buccal occlusal line angle. A combination of a monofilament resorbable suture and PTFE was used to stabilize the site without primary closure. After 4.5 months of healing, the osseous defects were completely regenerated and two implants placed."

"As a user of amnion membranes for over 15 years, I have found AmnioExcite® from Salvin to be a great addition to my practice. AmnioExcite® is much easier to handle and place, but still adapts to adjacent structures such as bone, tooth roots or dental implants. It has the perfect balance of adaptation and handling that has been missing in amnion membranes, and I'm very pleased with the results."

"The innovation of making DFDBA in a fiber form has been a tremendous enhancement to this graft. The increase in surface area makes this osseoinductive clot stabilizer a must for one's regenerative armamentarium. Importantly, this fiber form of DFDBA transforms it into being much more user friendly."

Renovix-Plus® –
Barrier Membrane

Implant Placed In
Regenerated Bone

"Salvin continues to raise the bar with their regenerative products. The allogeneic blocks have elevated my abilities and given me additional options that I can depend on for ridge augmentation. The Renovix-PLUS® collagen membrane is one of the best on the market due to its versatility as a stiffer membrane, but also very moldable – it's really the best of both worlds."

6 Year Follow-Up

"OrACELL® provides an excellent alternative to autogenous tissue for tissue graft procedures. The pre-hydrated samples handle comparative to autogenous or even better. Over the years I have looked for an allograft with consistent quality and thickness, ease of handling, and predictable healing. I want to offer my patients the highest quality allograft on the market. I am confident I've got it covered with OrACELL®."

Evaluation of Osteoinductive Potential

An In Vitro Study Was Conducted To Examine Accessibility To Bioactive Proteins In ABM And DBM¹. The Content Of BMP-2 Was Measured Over Time Using An Enzyme Linked Immunosorbent Assay (ELISA).

Study Results

- Soluble BMP-2 Was Detected In ABM At An Earlier Time Compared To Particulate DBM
- ABM's Open Pore Structure Provides Earlier Accessibility To Bone Proteins
